PROJECTS

IJWORK

React.js, Redux, Javascript, Websocket, Python, Material UI.

Ijwork is one of the application i have worked on it. The purpose of the application is for company management purpose where we provide all the management thing in a single application. we have created a cloud file management where user can upload there file and they will share a file to another users, we have also created a chat system where user can message and call with other person and we have also created a task management system where team can manage their task. All this functionality we have provide in the single application..

WEBDEVPOOL

React.js, Redux, Node.js, Express, Mongodb, Jwt, Bootstrap, Fontawesome, EmailJs.

Build a community for Developers where users can create a profile and also view profiles of other users. A user can post, like, dislike and comment on any post. Github Repository integration is also provided for each profile. Developed the Authentication page and Dashboard page and send a request to a back-end from Redux.

Web Tracking

React, Socket.io, Google Map

It's a web tracking application which is based on tracking the vehicle on the based of the location of that driver. We are using a google map for showing a map for showing the location of the driver and we are using a socket.io for tracking the application.
